WORK EXPERIENCE

Fullstack Engineer | BeneNav **Nov 2024 – Aug 2026**

- Developed and maintained features across the company's HR/employee-management dashboard (**React, MUI, Redux Toolkit**) and its **backend API** (**Node.js, Express, TypeScript, MongoDB**), resolving bugs across both the **frontend** and the data layer.
- Built and published an internal shared **TypeScript models package** consumed by both the **frontend dashboard** and **backend API**, keeping data types consistent across the **fullstack** codebase and reducing duplication.
- Designed and developed reusable components for the company's **Storybook-based UI component library**, translating **Figma** designs into production-ready, cross-platform components.
- Created and configured custom **Claude Skills** and **AI agents** to support **development workflows**, automate repetitive tasks, and provide task-specific **context** and **instructions**.
- Diagnosed and fixed bugs on the company's marketing site (**React, Vite, TypeScript, Tailwind CSS**), improving stability and UX.

Fullstack Developer | DevsData LLC **Jan 2024 – Present**

- Executed **e2e** development across **frontend** and **backend**, delivering features, **integrations**, and fixes for production applications.
- Collaborated with developers to **build**, **configure**, **test**, and validate **n8n** and **Make** automations, reviewing **workflows**, identifying issues, and coordinating team checks to ensure they behaved as expected.
- Worked across multiple **application layers**, tracing issues from **React UI** behavior through **API requests** and **backend logic** to identify and fix root causes.
- Develop and refactor reusable **React/TypeScript components**, improving maintainability and consistency across high-traffic pages.
- Debugged and resolved **frontend, backend, and API issues**, using **systematic testing** and investigation to identify root causes.
- Integrated with the **HubSpot API** to **retrieve** and **update** contacts and deals, manage **client information**, and **track** customer interactions and **follow-ups**.
- Worked with **Node.js, Express, MongoDB, Supabase, Git/GitLab,** and third-party **APIs** while managing tasks in **ClickUp** and coordinating changes through **staging**, **code reviews**, and **production deployments**.

PROJECTS

FlowDesc.app (React 19, TypeScript, Node.js, Express, PostgreSQL, Drizzle, Socket.IO, GitHub Actions):

- Built and deployed **a project-management SaaS** (issues, board, sprints, analytics), live on **Render** and **Neon**, with a **Cloudflare domain**, **email routing** and a scheduled **Worker** that keeps the server warm.
- Typed **monorepo** with **Zod contracts** shared by the **Express API** and the **React** app; tenant scoping on every query.
- Added real-time updates (**Socket.IO**), **optimistic updates**, and **version-checked** edits that never overwrite silently.
- Cut sprint-velocity analytics from **3.9s to 19 ms** and project deletion from **9s to 0.6s at 20,000 issues**.
- Built secure auth: **JWT** with **rotating refresh tokens**, **Argon2id**, **Google/GitHub sign-in**, **rate limiting**, **strict CSP**.
- Published an **MCP server** to **npm** with provenance via **GitHub Actions**, so AI apps like Claude can read and update issues.
- **700+** unit/API tests and a **280+** test Playwright suite running in **CI**, split into 4 parallel **shards**.
- Built AI features: an in-app **RAG assistant** (Postgres full-text **retrieval**, Llama on **Cloudflare Workers AI**, cited answers, **prompt-injection** defenses) and an **MCP server** on **npm** with provenance.

eCommerce Web Application (C#, ASP.NET Core Web API, React, PostgreSQL, JWT, PayPal API, Postman):

- Developed **full-stack platform** with product catalog, shopping cart, and secure checkout functionality
- Implemented **JWT authentication**, PayPal **payment integration**, and comprehensive **RESTful API** with **20+** endpoints
- Built responsive **React frontend** with real-time cart updates and **optimized database queries**

SKILLS

- **Languages:** TypeScript, JavaScript, C#, C
- **Web Development:** React, Node.js, Express.js, Redux Toolkit, REST APIs, WebSockets (Socket.IO), MUI, Tailwind CSS, Vite, Storybook
- **Databases & DevOps:** PostgreSQL, MongoDB, Drizzle ORM, Supabase, Scylla, Docker, Docker Compose, GitHub Actions, CI/CD, Postgres full-text search.
- **Development Tools:** Git, GitHub, GitLab, Postman, HubSpot, Swagger, Figma, ClickUp, Slack.
- **AI & Integrations:** Claude Code, OpenAI Codex, Custom Claude Skills, MCP Server Development, RAG, LLM Integration (Llama, Cloudflare Workers AI), n8n, Make.

EDUCATION

Bachelor in Computer Science | Kutaisi International University **2023 – 2027**

- **Relevant Coursework:** Data Structures & Algorithms (Java - 4.0 GPA), Database Systems (PostgreSQL - 3.7 GPA), Software Engineering, Web Development, Computer Architecture

.NET Back-End Development Course | TBC IT Academy **2024 – 2025**

- Completed intensive bootcamp covering ASP.NET Core, Entity Framework Core, Clean Architecture, MediatR, and industry best practices

GitHub LeetCode Portfolio
